BEHAVIORAL HEALTH DIVISION

ABOUT US

HIA supports and integrates a comprehensive early childhood behavioral health program. We serve children and families living with developmental delays and disabilities, Autism Spectrum Disorders, physical and social challenges, attention deficit disorders, and emotional-behavioral disturbances.

OUR APPROACH

WHAT IS EARLY INTENSIVE DEVELOPMENT AND BEHAVIORAL INTERVENTION?

At “Health Innovations of America,” we provide EIDBI services. The purpose of EIDBI is to:

Increase independence and improve long-term outcomes. Provide supportive therapeutic services in a variety of settings such as home, center, school and community. Support parents and families of people with ASD and related conditions through education, family training and counseling.

WHAT IS “APPLIED BEHAVIOR ANALYSIS THERAPY?”

Applied Behavior Analysis (ABA) therapy is the only evidence-based form of therapy known to improve skill acquisition and behavior for those with ASD and/or related conditions. ABA uses reinforcement as the basis of learning. Through individualized programming, therapists will break down the skills needed for the child to reach their long-term goals. The goal of ABA is to increase skills in communication and socialization, while decreasing restrictive, repetitive and unwanted behaviors.

OUR TEAM

At HIA, the staff are qualified to provide the level of specialized intervention that enables each child to make significant and ongoing improvements in behavior, communication and social skills. Each child's clinical team consists of a Qualified Supervising Professional, Board Certified Behavior Analyst, Program Manager, Lead Therapists and a variety of trained behavior therapists. At HIA, we are devoted to promoting the highest standard of service by collaborating with each child's care team.

HEALTH INNOVATIONS OF AMERICA INTEGRATED ABA PROGRAM

Our program addresses all areas of human functioning across the following eight domains:

SOCIAL INTERACTION & PLAY

Improving social skills and increasing positive interactions with others

COMMUNICATION

The ability to give, exchange and understand information

EDUCATION & LEARNING

Increasing academic knowledge enjoyment and interactive activities

EXECUTIVE FUNCTIONING

Improving working memory, planning, self-control and flexible thinking

COGNITION

Increasing memory, processing, logic and reasoning

SENSORY REGULATION

Integrating and understanding sensory input from eyes, ears, taste, touch, smell and movement

SELF-CARE

Increasing the ability to care for oneself

SAFETY

Skills needed to ensure the safety of self and others
